### Mission Statement & Logic Model

The mission of this organization is to support and empower minors who are victims of domestic minor sex trafficking. This organization believes that community education plays a vital role in the rehabilitation and healing process for the minors. This organization is here to provide comprehensive rehabilitation services to victims, while also being committed to educating the community. Therapy is a central focus of the rehabilitation process and we offer different practices of evidence-based therapy for each victim’s needs. Aside from therapy, we offer services including legal, medical, clothing, food, and other assistance.

**GOALS/OBJECTIVES**

1. Identify, educate, and advocate the victims' needs for safety and healing.
2. Provide comprehensive services to minors that are victims of sex trafficking and assure long-term stability.
3. Increase awareness throughout the community to prevent domestic minor sex trafficking and reduce stigma surrounding the survivors.
4. Improve and enhance community education and programming to prevent domestic minor sex trafficking.

### Needs Assessment

![Gender Orientation (%)](chart)

Each figure represents 10,000 minors who are victims of DMST in the United States

### Program & Organization Flow Chart

### Evaluation Plan

**Quantitative: Outcome Evaluation – Trainings**

**Relationship to Mission Statement – Research Question**

Will people enrolled in DMST empower people to make more calls to sex trafficking hotlines to make reports?

**Outcome Measure (Dependent Variable):**

- Number of referrals to the hotline.

**Hypothesis**

The dependent variable is the number of calls to make reports of DMST.

**Overall Design**

The overall design will be by using pre and posttests. The pretests will assess how many people have been trained and made calls to the sex trafficking hotline, the posttests will assess how knowledgeable each individual is on DMST awareness and if they feel comfortable enough to make calls on the hotline.

**Analysis Techniques**

After 6 months from the training, we will track number of calls that the state hotline is receiving.

**Pretest:** Knowledge, awareness, and quantitative analysis

**Relationship to Mission Statement – Research Question**

Will people in the community recognize that each county receives in DMST empower people to make more calls to sex trafficking hotlines to make reports?

**Outcome Measure (Dependent Variable):**

- Number of referrals to the hotline.

**Hypothesis**

The dependent variable is the number of calls to make reports of DMST.

**Overall Design**

The overall design will be by using pre and posttests. **Analysis Techniques**

After 6 months from the training, we will track number of calls that the state hotline is receiving.

**Referrals:**

- Knowledge, awareness, and quantitative analysis

**Evaluation Plan**

This organization has a two-part intervention, community trainings about DMST and victim rehabilitation and mentor services. This is because this organization believes that community education plays a vital role in the rehabilitation and healing process for the minors.

In 2017, a study was conducted that analyzed data calls from health care professionals to the National Human Trafficking Resource Center (NHTRC) from 2008-2014 who received human trafficking training.1

Human trafficking training included global estimates of prevalence of trafficking, risk factors, characteristics of victims and their traffickers, and basic identification signs and symptoms of possible human trafficking in the health care training.

- Their database demonstrated increasing trends in 2018 in calls from health care professionals who received human trafficking training.

A longitudinal evaluation of a survivor-mentor program for child survivors of sex trafficking in the United States2:

- Used a one-group repeated measure design among 41 minors who experienced commercial sexual exploitation (CSE).
- Aim of the study was to assess whether youth who participated in the CSE survivor-mentor program had evidence changes in their CSE victimization, dating abuse victimization, health, social support, and coping during the year following their enrollment in program.
- They found at the six and twelve-month baseline for minors receiving survivor-mentor services, they were less likely to engage in sexually or delinquent explicit behavior, use illicit drugs, and had better coping and social skills.
- Overall, their findings demonstrate that youth who received survivor-mentor services experienced improved over all well-being.
